Calculating *Differential* Galois groups

Calculating Galois groups in theory

Calculating Galois groups in theory

Can we calculate Galois groups?

Calculating Galois groups in theory

Can we calculate Galois groups?

Yes we can, but

$$f(x) \in \mathbb{Z}[x], \ \deg(f) = n \ \gcd(f, f') = 1$$

$$f(x) \in \mathbb{Z}[x], \ \deg(f) = n \ \gcd(f, f') = 1$$

$$1) \operatorname{Let} R(Y, X_1, \dots, X_n) = \prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_{\sigma(1)} X_1 + \dots + \alpha_{\sigma(n)} X_n))$$

$$= \prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_1 X_{\sigma^{-1}(1)} + \dots + \alpha_n X_{\sigma^{-1}(n)}))$$

$$\in \mathbb{Q}[Y, X_1, \dots, X_n]$$

$$f(x) \in \mathbb{Z}[x], \ \deg(f) = n \ \gcd(f, f') = 1$$

1) Let
$$R(Y, X_1, ..., X_n)$$
 = $\prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_{\sigma(1)}X_1 + ... + \alpha_{\sigma(n)}X_n))$
 = $\prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_1X_{\sigma^{-1}(1)} + ... + \alpha_nX_{\sigma^{-1}(n)}))$
 $\in \mathbb{Q}[Y, X_1, ..., X_n]$

2) Factor
$$R(Y, X_1, ..., X_n) = R_1(Y, X_1, ..., X_n) \cdots R_t(Y, X_1, ..., X_n)$$

$$f(x) \in \mathbb{Z}[x], \ \deg(f) = n \ \gcd(f, f') = 1$$

1) Let
$$R(Y, X_1, ..., X_n)$$
 = $\prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_{\sigma(1)}X_1 + ... + \alpha_{\sigma(n)}X_n))$
 = $\prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_1X_{\sigma^{-1}(1)} + ... + \alpha_nX_{\sigma^{-1}(n)}))$
 $\in \mathbb{Q}[Y, X_1, ..., X_n]$

2) Factor
$$R(Y, X_1, \dots, X_n) = R_1(Y, X_1, \dots, X_n) \cdots R_t(Y, X_1, \dots, X_n)$$

Galois group of
$$f = \{ \sigma \in S_n \mid R_1(Y, X_{\sigma(1)}, \dots, X_{\sigma(n)}) = R_1(Y, X_1, \dots, X_n) \}$$

(Kronecker, Gründzuge ..., Crelle, 92, 1882)

$$f(x) \in \mathbb{Z}[x], \ \deg(f) = n \ \gcd(f, f') = 1$$

1) Let
$$R(Y, X_1, ..., X_n)$$
 = $\prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_{\sigma(1)}X_1 + ... + \alpha_{\sigma(n)}X_n))$
= $\prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_1X_{\sigma^{-1}(1)} + ... + \alpha_nX_{\sigma^{-1}(n)}))$
 $\in \mathbb{Q}[Y, X_1, ..., X_n]$

2) Factor
$$R(Y, X_1, ..., X_n) = R_1(Y, X_1, ..., X_n) \cdots R_t(Y, X_1, ..., X_n)$$

Galois group of
$$f = \{ \sigma \in \mathcal{S}_n \mid R_1(Y, X_{\sigma(1)}, \dots, X_{\sigma(n)}) = R_1(Y, X_1, \dots, X_n) \}$$

High Complexity!

Question: Is there an algorithm to compute the Galois group of $f(x) \in \mathbb{Z}[x]$ whose running time is given as a polynomial in the size of f?

Question: Is there an algorithm to compute the Galois group of $f(x) \in \mathbb{Z}[x]$ whose running time is given as a polynomial in the size of f?

For
$$m \in \mathbb{Z}$$
, $\operatorname{size}(m) = \operatorname{number}$ of digits $\simeq \log(m)$
For $f(x) = a_n x^n + \ldots + a_0 \in \mathbb{Z}[x]$, $\operatorname{size}(f(x)) = n \cdot \max_i \{\operatorname{size}(a_i)\}$.

Revised Question:Is there an algorithm to compute generators of the Galois group of $f(x) \in \mathbb{Z}[x]$ whose running time is given as a polynomial in the size of f?

We do not know!

Galois (Discours préliminaire):

"Si maintenant vous me donnez une équation que vous aurez choisie à votre gré et que vous desiriez connaître si elle est ou non soluble par radicaux, je n'aurai rien à y faire que de vous indiquer le moyen de répondre à votre question, sans vouloir charger ni moi ni personne de le faire. En un mot les calculs sont impraticables."

Galois (Discours préliminaire):

"Si maintenant vous me donnez une équation que vous aurez choisie à votre gré et que vous desiriez connaître si elle est ou non soluble par radicaux, je n'aurai rien à y faire que de vous indiquer le moyen de répondre à votre question, sans vouloir charger ni moi ni personne de le faire. En un mot les calculs sont impraticables."

Question: Is there an algorithm to decide if $f(x) \in \mathbb{Z}[x]$ is solvable by radicals whose running time is given as a polynomial in the size of f?

Galois (Discours préliminaire):

"Si maintenant vous me donnez une équation que vous aurez choisie à votre gré et que vous desiriez connaître si elle est ou non soluble par radicaux, je n'aurai rien à y faire que de vous indiquer le moyen de répondre à votre question, sans vouloir charger ni moi ni personne de le faire. En un mot les calculs sont impraticables."

Question: Is there an algorithm to decide if $f(x) \in \mathbb{Z}[x]$ is solvable by radicals whose running time is given as a polynomial in the size of f?

Landau and Miller (Solvability by radicals in polynomial time, J. Comp. Sys. Sci.,1985):

"If now you give us a polynomial which you have chosen at your pleasure, and if you want to know if it is or is not solvable by radicals, we have presented techniques to answer that question in polynomial time."

- P'alfy (1982): $G \subset S_n$ solvable, transitive and primitive implies $|G| < n^{3.25}$
- Landau-Miller (1985): Showed how to reduce to the case of equations with transitive, primitive Galois groups.

Calculating Galois groups in practice

Things that work

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

$$R(Y, X_1, \dots, X_n) = \prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_{\sigma(1)}X_1 + \dots + \alpha_{\sigma(n)}X_n))$$

$$= R_1 \cdots R_t \text{ over } \mathbb{Q}$$

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

$$R(Y, X_1, \dots, X_n) = \prod_{\sigma \in \mathcal{S}_n} (Y - (\alpha_{\sigma(1)}X_1 + \dots + \alpha_{\sigma(n)}X_n))$$

$$= R_1 \cdots R_t \quad \text{over } \mathbb{Q}$$

$$= (R_{1,1} \cdots R_{1,m_1}) \cdots (R_{t,1} \cdots R_{t,m_t}) \mod p$$

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

$$f(x) \in \mathbb{Z}[x]$$
, monic, $\deg f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

$$\underline{\text{Fact:}} \text{ For } p \nmid \Delta(f), \quad Gal(f \pmod p)) \hookrightarrow Gal(f)$$

$$\underline{\text{Theorem of Frobenius}} \text{ Let } \quad n = n_1 + \ldots + n_t, \quad n_1 \geq n_2 \ldots \geq n_t$$

$$\text{Density of } \{p \mid p \nmid \Delta(f), \quad f = f_1 \cdots f_t \pmod p, \quad \deg(f_i) = n_i\}$$

$$\parallel$$

$$\frac{1}{|G|} \cdot |\{\sigma \in G \mid \sigma = \tau_1 \cdots \tau_t, \quad \tau_i \text{ a cycle of length } n_i\}|$$

Mod p techniques

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

Fact: For
$$p \nmid \Delta(f)$$
, $Gal(f \pmod{p}) \hookrightarrow Gal(f)$

Theorem of Frobenius Let
$$n=n_1+\ldots+n_t, \ n_1\geq n_2\ldots\geq n_t$$

Density of $\{p\mid p\nmid \Delta(f), \ f=f_1\cdots f_t\ (\text{mod }p),\ \deg(f_i)=n_i\}$

$$\parallel$$

$$\frac{1}{|G|}\cdot|\{\sigma\in G\mid \sigma=\tau_1\cdots\tau_t,\ \tau_i\ \text{a cycle of length }n_i\}|$$

Advantages:

- Easy to factor mod p (Berlekamp, 1967)
- Gives a good probabilistic test for S_n , A_n ; good evidence for other groups.

Mod p techniques

$$f(x) \in \mathbb{Z}[x]$$
, monic, deg $f = n$ $\Delta(f) = \prod (\alpha_i - \alpha_j)^2 \in \mathbb{Z}$

Fact: For
$$p \nmid \Delta(f)$$
, $Gal(f \pmod{p}) \hookrightarrow Gal(f)$

Theorem of Frobenius Let
$$n=n_1+\ldots+n_t, \ n_1\geq n_2\ldots\geq n_t$$

Density of $\{p\mid p\nmid \Delta(f), \ f=f_1\cdots f_t\ (\text{mod }p),\ \deg(f_i)=n_i\}$
 \parallel
 $\frac{1}{|G|}\cdot|\{\sigma\in G\mid \sigma=\tau_1\cdots\tau_t,\ \tau_i\ \text{a cycle of length }n_i\}|$

Advantages:

- Easy to factor mod p (Berlekamp, 1967)
- Gives a good probabilistic test for S_n , A_n ; good evidence for other groups.

Disadvantages:

- Asymptotic result
- Groups not determined by distribution of cycle patterns already in deg. 8

Example:
$$f(x) = x^3 + bx + c \in \mathbb{Q}[x]$$
 Gal $(f) \subset S_3$

Example:
$$f(x) = x^3 + bx + c \in \mathbb{Q}[x]$$
 Gal $(f) \subset S_3$

$$f(x) = (x + \alpha)(x + \beta x + \gamma), \ \alpha, \beta, \gamma \in \mathbb{Q} \Longrightarrow Gal(f) = S_2 \text{ or } \{id\}$$

Example:
$$f(x) = x^3 + bx + c \in \mathbb{Q}[x]$$
 Gal $(f) \subset S_3$

$$f(x) = (x + \alpha)(x + \beta x + \gamma), \ \alpha, \beta, \gamma \in \mathbb{Q} \Longrightarrow Gal(f) = S_2 \text{ or } \{id\}$$

f(x) irreducible $\Longrightarrow \operatorname{Gal}(f)$ acts transitively on the roots $\alpha_1, \alpha_2, \alpha_3$ Group Theory $\Longrightarrow \operatorname{Gal}(f) = \mathcal{S}_3$ or \mathcal{A}_3

Example:
$$f(x) = x^3 + bx + c \in \mathbb{Q}[x]$$
 Gal $(f) \subset S_3$

$$f(x) = (x + \alpha)(x + \beta x + \gamma), \ \alpha, \beta, \gamma \in \mathbb{Q} \Longrightarrow Gal(f) = S_2 \text{ or } \{id\}$$

f(x) irreducible $\Longrightarrow \operatorname{Gal}(f)$ acts transitively on the roots $\alpha_1, \alpha_2, \alpha_3$ Group Theory $\Longrightarrow \operatorname{Gal}(f) = \mathcal{S}_3$ or \mathcal{A}_3

$$F(z) = z^2 + 4b^3 + 27c^2 = (z + \delta)(z - \delta)$$
 $\delta = (\alpha_1 - \alpha_2)(\alpha_2 - \alpha_3)(\alpha_3 - \alpha_1)$

 δ is an invariant of \mathcal{A}_3 but not of \mathcal{S}_3 so

$$Gal(f) = A_3 \Leftrightarrow F(z)$$
 factors over \mathbb{Q} .

Example:
$$f(x) = x^3 + bx + c \in \mathbb{Q}[x]$$
 Gal $(f) \subset S_3$

$$f(x) = (x + \alpha)(x + \beta x + \gamma), \ \alpha, \beta, \gamma \in \mathbb{Q} \Longrightarrow Gal(f) = S_2 \text{ or } \{id\}$$

f(x) irreducible $\Longrightarrow \operatorname{Gal}(f)$ acts transitively on the roots $\alpha_1, \alpha_2, \alpha_3$ Group Theory $\Longrightarrow \operatorname{Gal}(f) = \mathcal{S}_3$ or \mathcal{A}_3

Let

$$F(z) = z^2 + 4b^3 + 27c^2 = (z + \delta)(z - \delta)$$
 $\delta = (\alpha_1 - \alpha_2)(\alpha_2 - \alpha_3)(\alpha_3 - \alpha_1)$

 δ is an invariant of A_3 but not of S_3 so

$$Gal(f) = A_3 \Leftrightarrow F(z)$$
 factors over \mathbb{Q} .

Reduce calculation of Galois groups to factorization of associated polynomials

I. A finite group is determined by its permutation representations.

I. A finite group is determined by its permutation representations.

Given $H \subsetneq G$, $\exists \rho : G \to \mathcal{S}_N$ such that G acts transitively but H does not.

I. A finite group is determined by its permutation representations.

Given $H \subsetneq G$, $\exists \rho : G \to \mathcal{S}_N$ such that G acts transitively but H does not.

II. One can find permutation representations of G = Gal(K/k) in K.

Let
$$\rho: G \to \mathcal{S}_N$$
, then $\exists \beta_1, \dots, \beta_N \in K$ such that

$$\sigma(\alpha_i) = \alpha_{\rho(\sigma)(i)}, \text{ for all } \sigma \in G$$

I. A finite group is determined by its permutation representations.

Given $H \subsetneq G$, $\exists \rho : G \to \mathcal{S}_N$ such that G acts transitively but H does not.

II. One can find permutation representations of G = Gal(K/k) in K.

Let
$$\rho:G o \mathcal S_N$$
, then $\exists\ eta_1,\dots,eta_N\in K$ such that $\sigma(lpha_i)=lpha_{
ho(\sigma)(i)},\ \ ext{for all }\sigma\in G$

Given $Gal(K/k) \subset G$, to show Gal(K/k) = G:

- ullet For each maximal subgroup $H\subsetneq G$, find a representation as in I.
- Find $\beta_1, \ldots, \beta_N \in K$ as in II.
- Form $F_H(z) = \prod (z \beta_i) \in k[z]$.
- If $F_H(z)$ is irreducible for each H, then Gal(K/k) = G.

What do Differential Galois Groups Measure?

What do Differential Galois Groups Measure?

• Algebraic Dependence: K - a PV-extension of $\mathbb{C}(z)$ with PV-group G

$$\operatorname{tr.\,deg.}_{\mathbb{C}(z)}K=\dim_{\mathbb{C}}G$$

What do Differential Galois Groups Measure?

• Algebraic Dependence: K - a PV-extension of $\mathbb{C}(z)$ with PV-group G

$$\operatorname{tr. deg.}_{\mathbb{C}(z)}K=\dim_{\mathbb{C}}G$$

Example:

$$\begin{split} L(y) &= y'' + \frac{1}{z} + (1 - \frac{\lambda^2}{z^2})y = 0, \qquad \lambda - \frac{1}{2} \notin \mathbb{Z} \\ &\Rightarrow \quad \mathrm{DGal} = \mathrm{SL}_n(\mathbb{C}) \\ &\Rightarrow \quad \mathrm{tr. \ deg.}_{\mathbb{C}(z)}\mathbb{C}(z)(J_\lambda, Y_\lambda, J'_\lambda, Y'_\lambda) = 3 \end{split}$$

L(y) = 0 is solvable in terms of liouvillian functions if there exists a tower of fields $\mathbb{C}(z) = K_0 \subset \ldots \subset K_n$ such that $K_{i+1} = K_i(t_i)$ with

- \diamond t_i algebraic over K_i , or
- \diamond $t_i' \in K_i$, i.e., $t_i = \int u_i$, $u_i \in K_i$, or
- $\diamond t'_i/t_i \in K_i$, i.e., $t_i = e^{\int u_i}, u_i \in K_i$.

with $K \subset K_n$, where K is the PV-extension associated with L(y) = 0.

L(y) = 0 is solvable in terms of liouvillian functions if there exists a tower of fields $\mathbb{C}(z) = K_0 \subset \ldots \subset K_n$ such that $K_{i+1} = K_i(t_i)$ with

- \diamond t_i algebraic over K_i , or
- \diamond $t_i' \in K_i$, i.e., $t_i = \int u_i$, $u_i \in K_i$, or
- $\diamond t'_i/t_i \in K_i$, i.e., $t_i = e^{\int u_i}$, $u_i \in K_i$.

with $K \subset K_n$, where K is the PV-extension associated with L(y) = 0.

Example:

$$L(y) = \frac{d^2y}{dx^2} - \frac{1}{2x}\frac{dy}{dx} - xy$$

$$K_0 = \mathbb{C}(x) \subset K_1 = K_0(\sqrt{x}) \subset K_2 = K_1(e^{\int \sqrt{x}})$$

$$\{e^{\int \sqrt{x}}, e^{-\int \sqrt{x}}\} \text{ is a basis for Soln}(L = 0)$$

L(y) = 0 is solvable in terms of liouvillian functions if there exists a tower of fields $\mathbb{C}(z) = K_0 \subset \ldots \subset K_n$ such that $K_{i+1} = K_i(t_i)$ with

- \diamond t_i algebraic over K_i , or
- \diamond $t_i' \in K_i$, i.e., $t_i = \int u_i$, $u_i \in K_i$, or
- $\diamond t'_i/t_i \in K_i$, i.e., $t_i = e^{\int u_i}$, $u_i \in K_i$.

with $K \subset K_n$, where K is the PV-extension associated with L(y) = 0.

Example:

$$L(y) = \frac{d^2y}{dx^2} - \frac{1}{2x}\frac{dy}{dx} - xy$$

$$K_0 = \mathbb{C}(x) \subset K_1 = K_0(\sqrt{x}) \subset K_2 = K_1(e^{\int \sqrt{x}})$$

$$\{e^{\int \sqrt{x}}, e^{-\int \sqrt{x}}\} \text{ is a basis for Soln}(L = 0)$$

<u>Thm:</u> L(y) = 0 solvable in terms of liouvillian functions $\Leftrightarrow \mathrm{DGal}$ contains a solvable subgroup of finite index.

$$L(y) = y^{(n)} + a_{n-1}y^{(n-1)} + \ldots + a_0y$$
 $a_i \in \overline{\mathbb{Q}}(x)$

$$L(y) = y^{(n)} + a_{n-1}y^{(n-1)} + \ldots + a_0y$$
 $a_i \in \overline{\mathbb{Q}}(x)$

• One can decide if L(y) = 0 has algebraic solutions

n = 2: Schwarz, Klein :: Baldassari-Dwork, van Hoeij-Weil, ...

 $n \ge 2$: Jordan, Boulanger, Painlevé :: Risch, S.

$$L(y) = y^{(n)} + a_{n-1}y^{(n-1)} + \ldots + a_0y$$
 $a_i \in \overline{\mathbb{Q}}(x)$

• One can decide if L(y) = 0 has algebraic solutions

n = 2: Schwarz, Klein :: Baldassari-Dwork, van Hoeij-Weil, ...

 $n \ge 2$: Jordan, Boulanger, Painlevé :: Risch, S.

• One can decide if L(y) = 0 is solvable in terms of liouvillian functions.

n = 2: Pepin :: Kovacic.

 $n \ge 2$: Marotte :: S., Ulmer, ... (n = 3 van Hoeij, Weil, Ulmer, ..)

$$L(y) = y^{(n)} + a_{n-1}y^{(n-1)} + \ldots + a_0y$$
 $a_i \in \overline{\mathbb{Q}}(x)$

• One can decide if L(y) = 0 has algebraic solutions

n = 2: Schwarz, Klein :: Baldassari-Dwork, van Hoeij-Weil, ...

 $n \ge 2$: Jordan, Boulanger, Painlevé :: Risch, S.

• Can characterize when L(y) = 0 is solvable in terms of linear DE of lower order and decide for n = 3.

Can decide if L(y) = 0 solvable in terms of Airy, Bessel, Cylinder, Kummer, Laguerre, Whittaker . . . (van Hoeij et al)

• One can compute the Galois group. (Hrushovsky)

Ideas based on Tannakian philosophy:

• A linear algebraic group *G* is determined by its linear representations.

- A linear algebraic group *G* is determined by its linear representations.
 - ♦ Can recover *G* from its category of fin. dim. *G*-modules
 - Can construct all fin. dim. G-modules from a single faithful G-module via sums, submodules, quotients and duals.

- A linear algebraic group *G* is determined by its linear representations.
 - ♦ Can recover *G* from its category of fin. dim. *G*-modules
 - Can construct all fin. dim. G-modules from a single faithful G-module via sums, submodules, quotients and duals.
- A linear differential equation is an avatar for the representation theory of its PV-group.

- A linear algebraic group *G* is determined by its linear representations.
 - ⋄ Can recover *G* from its category of fin. dim. *G*-modules
 - Can construct all fin. dim. G-modules from a single faithful G-module via sums, submodules, quotients and duals.
- A linear differential equation is an avatar for the representation theory of its PV-group.
 - \diamond Given L(y) with $V = \operatorname{Soln}(L(y))$, for any fin. dim. G-module W, can construct an $\bar{L}(y)$ with $\operatorname{Soln}(\bar{L}(y)) = W$.
